

## **The AI – Young Plasma Opportunity**

The world has enough for everyone's needs, but not everyone's greed.  
AI jobs losses will be unstoppable and significant.

AI is posing a 'barrier' to young workers as 8 million jobs are put at risk,  
with entry-level, those in part time jobs, and women among the most affected.

We must institute policies to mitigate AI-driven unemployment impacts on our youth.

---

The median income for 20–24-year-olds is \$25,000 for women and \$27,000 for men.

Paying 18-25-year-old donors \$500 per weekly 2-hour donation earns  
\$25,000 per year and \$200,000 over eight years.

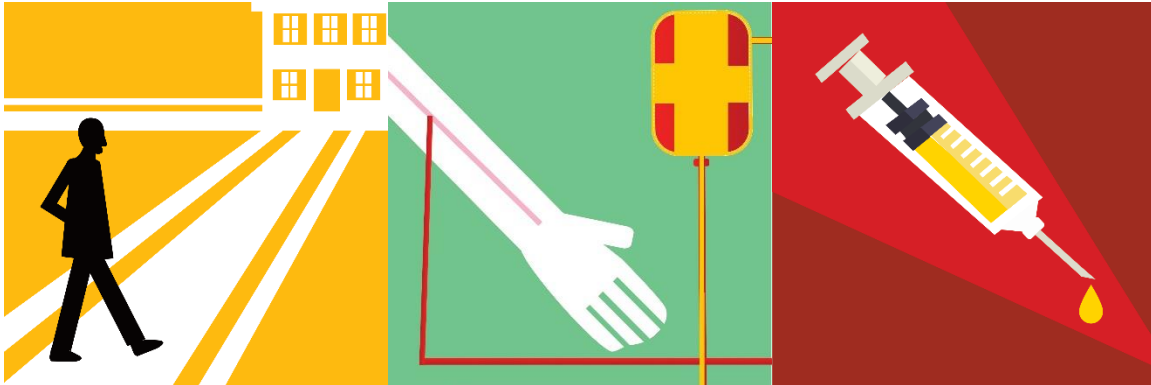

Detoxifying and not debilitating, donors would then have  
the time, health, and resources over eight years to study and/or work.

The 300-liters each donor contributes would provide 150 age-related treatments.

**GOLDEN GIFT**

A 501(c)(3) Organization

## Opportunity distribution per donation

Donor \$500 – Blood bank \$500 – Licensed administrator per patient \$500 FOB  
\$1,500 to collect & administer 750-ml of yFFP®

\$4,500 for three collections delivers into each patient the study-average 2-L treatment prescribed in Stanford AD & PD, TX Medical Center PD & MS, and ongoing Golden Gift yFFP observational studies, with treatment-sustainability's of up to 2 to 4 years, of more than 650 individual yFFP prescriptions.

\$16,000 average per-month cost of PPTA sterilized plasma fractions.  
Quantumly inactive, ABO and sex-identifying donors is irrelevant.  
Costly, non-regenerative monthly-maintenance medicine.
