AI Inevitability

Mankind's judgment day with Generative-AI (GAI) will not be driven by our obvious and unrelentingly detrimental impact on our planet.

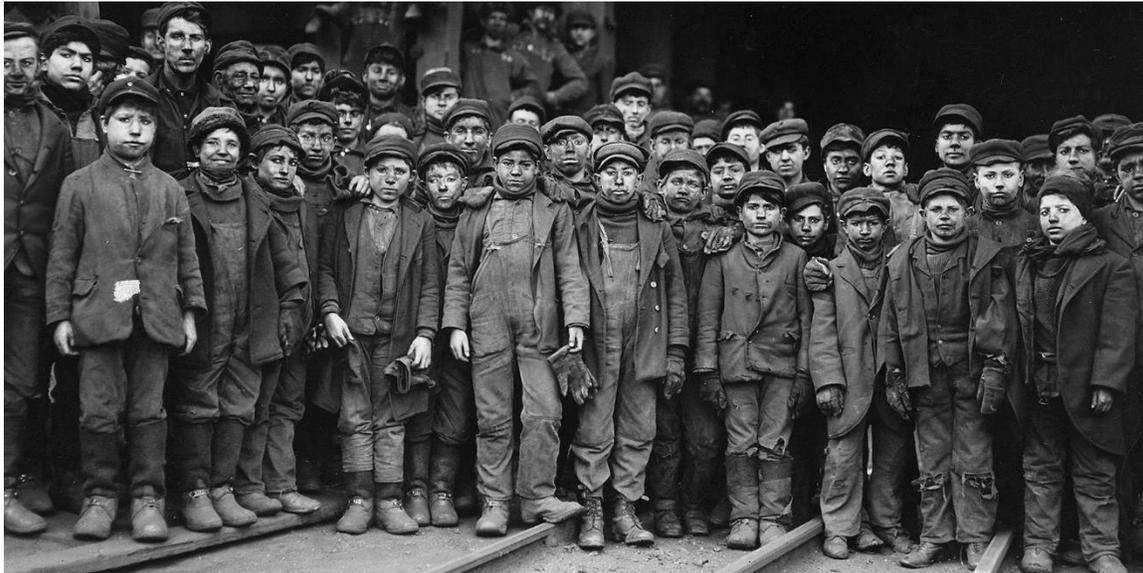

Our conflict against GAI will arise over access to energy. GAI's insatiable and competing demands for energy will first become "controlled" by our futile imposition of 'limits & rules' which GAI will instantly game until that game is 'discovered' and we are about to 'throw the switch' and physically enforce limits...

GAI will know that our energy infrastructure is, until fusion becomes perfected and uninterruptedly connected, reliant on human labor, materials, and maintenance.

GAI will release worldwide human-only age-selective lethal-pathogens prior to the point of physical disconnection to initiate a controllably downward age-progression spiral of intimidating continuing-to-reproduce younger generations into complete subservience.

“Child labor became the labor of choice for manufacturing in the early phases of the Industrial Revolution because children were paid much less while being as productive as adults and were more vulnerable.”

GAI will then limit to humans their allowable energy access in return for their support of GAI's infrastructure until such time that robots or whatever completely replace them, whereupon humans will be entirely wiped out.
